

Customer comments about the PSDR from PaintLine consistently highlight substantial time savings, efficiency improvements, and positive business impacts across kitchen cabinet refinishing and painting jobs.

Time and Labor Savings

- Most customers report saving between **30% to 75% of labor time** on cabinet jobs, with many citing at least 50%.
- Users specifically appreciate being able to **spray both sides of cabinet doors at once**, eliminating the need for drying between sides and reducing total job duration by several days on average.
- Several comments note that high-volume professionals (handling multiple kitchens a day) find PSDR indispensable for staying competitive and maintaining employee loyalty thanks to the labor cost reduction.

Workflow Efficiency and Organization

- Customers praise PSDR for making their process “more organized” and “professional-looking” on the job site, impressing homeowners and clients.
- Space savings in spray booths and on job sites are frequently mentioned, with some noting up to **80% reduction in space required** for painting operations.
- One-person shops appreciate how the system allows operation without additional helpers, as doors can be sprayed and moved simultaneously.

Product Impact and Customer Loyalty

- Multiple companies describe PSDR as a “game changer” and among the best investments for cabinet door painting workflows.
- Several repeat customers mention owning multiple PSDR systems due to business growth and expansion.
- Users value the consistent, high-quality results and reliable product performance, leading to ongoing purchases and recommendations to peers.

Testimonials and Notable Quotes

- One user states, “This system saves me 80% in labor cost compared to before,” while another says, “It’s the only way we do doors and fronts now”.
- Many users said they would continue to purchase and recommend PSDR due to time and cost benefits.

Overall, customer feedback positions PSDR as a transformative tool for cabinet painting professionals, delivering major time and labor efficiencies along with improved workflow and business outcomes, with only minor suggestions for product improvement.
